

Suggestions for Mayor Zohran Mamdani

Goal: Reduce claim frequency and severity to save money for free public transportation.

For NYC Government Vehicle Drivers:

Enhance drivers' training and stricter enforcement, especially in Brooklyn and Manhattan.

For Brooklyn Kings County Hospital:

Solve staff shortage problems, use money to train more staff instead of paying the claims.

For the Bronx NYPD and Jail System:

Launch correction facility reform and police reform, and add more cameras to catch evidence when jail staff and the NYPD are doing law enforcement.

For Education Department:

Build up a risk management model across public schools and use digital claim systems to reduce budget uncertainty and accrued statutory interest.

For PI Cases:

For those high-severity PI cases where NYC government liability is clear, early mediation programs should be established to avoid legal costs and accumulated interest.

For Civil Rights Cases:

Investigate historical cases and evaluate potential payouts for reserving money preparation. Mandate civil rights and constitutional police training. Add more devices for evidence collection.

Evidence Decay Prevention

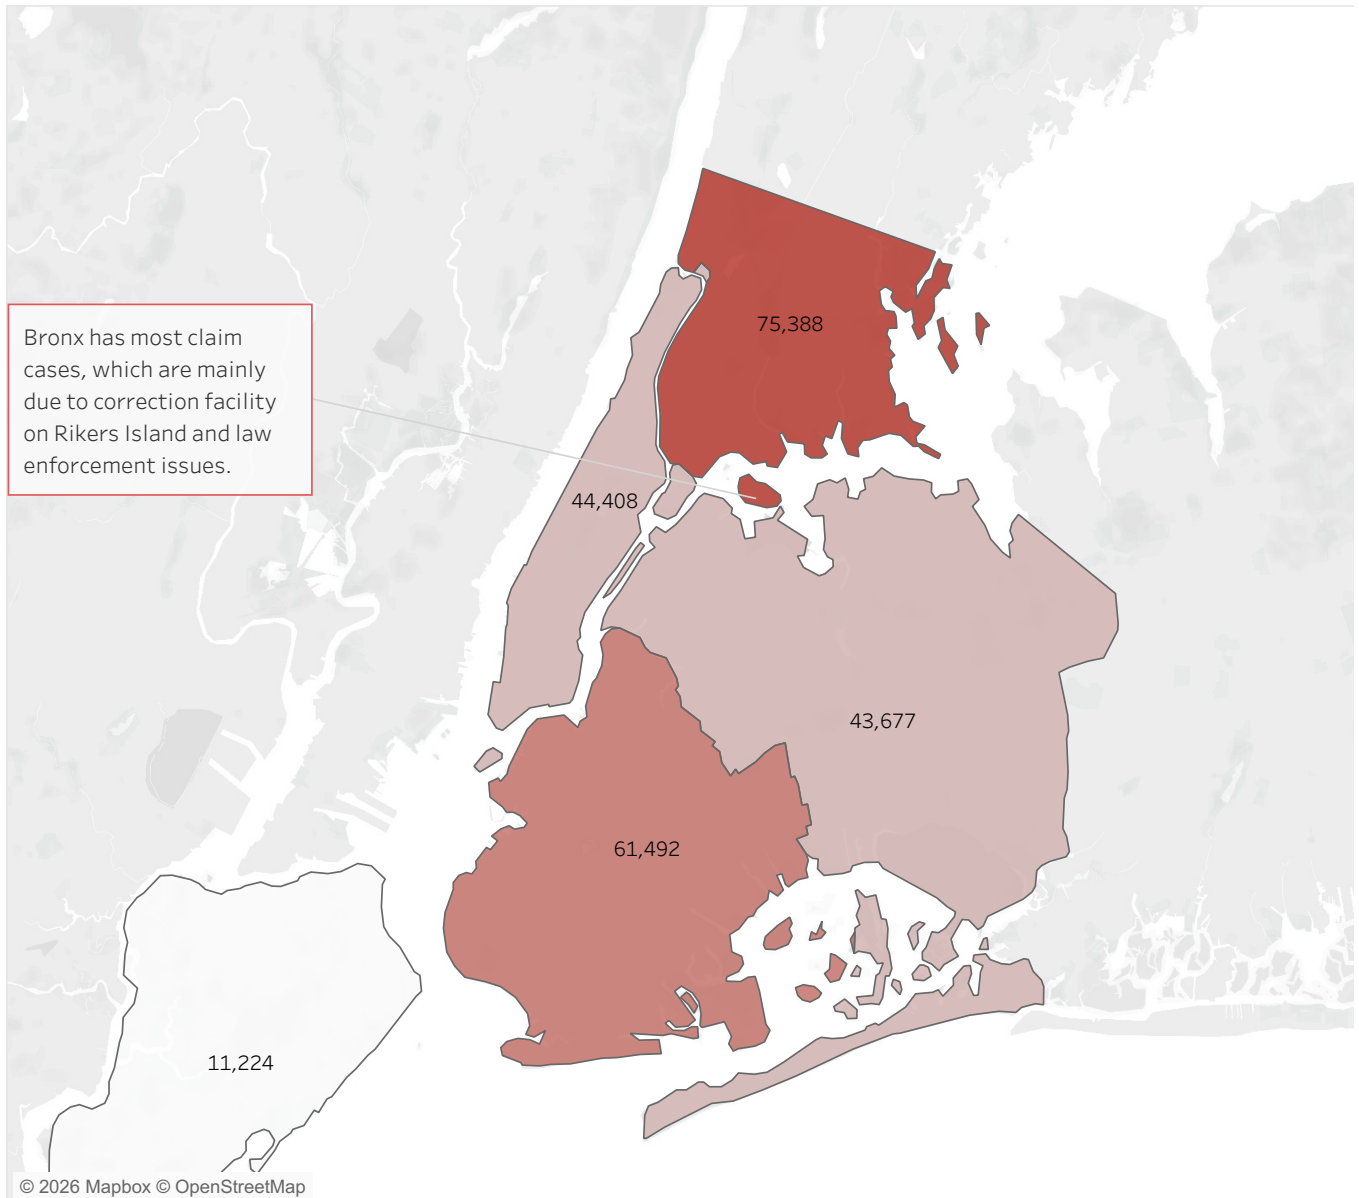

There might be speculative claims. The NYC government should establish digital evidence storage systems so that the evidence can be preserved for a long time.

A 'dangerous' small island that no one wants to visit.

So many car crashes across Brooklyn and Manhattan. NYPD is active in the Bronx.

Claims for Health/Education department may take 3.5 years..

Borough Case Count

Business Questions:

- Geography level: Which borough got the most claims? What kinds of claims and why?
- Department level: Which departments got the most claims? Top 3 departments? Any trend? Average claim amount for each department? Department frequency and severity? Tricky and long cases for each department?
- Claim cases: What are the major claim types? How are some super big cases? Outliers?
- Report lag and settlement efficiency: Will longer report lags and settlement days lead to higher payouts?
- NYPD Trend: Are claims getting fewer year by year?

Data Cleaning and Engineering Steps:

Step 1: Standardize borough name.

Step 2: Fill in NULLs for the disposition amount.

Step 3: Get the occurrence year from the occurrence date.

Step 4: Get report lag days and settlement days from occurrence date, filed date and disposition date.

Step 5: Clean and simplify Agency data and Claim Type data.

Step 6: Extract PI case from claim type for Personal Injury analysis.

After Cleaning with SQL:

borough_clean	claim_status	claim_money	occurrence_year	report_lag_days	settlement_days	simplified_agency	simplified_claim_type	is_personal_injury
